

1. Executive Summary & Core Vision

Logiskip is an enterprise AI supply chain risk prediction and procurement optimization platform. It transforms logistics operations from reactive firefighting into predictive strategy by forecasting supplier bottlenecks 30-90 days before impact.

Key Objectives

Predict delivery delays, quality defect surges, capacity issues, and price spikes before orders are placed.

2. Target Metrics & Objectives

Risk Prediction Horizon: Continuous dynamic rating from 0 (Safe) to 100 (Critical Risk).

Forecasting Accuracy: Under 8% Mean Absolute Percentage Error (MAPE).

Report Generation Latency: Automated AI executive briefs generated in under 15 seconds.

3. Functional Scope

- **Dynamic Risk Scoring Engine:** Evaluates historical late deliveries, defect rates, order volumes, and price changes to assign live risk scores.
- **What-If Simulation Engine:** Linear programming solver for simulating trade route blockages or supplier failure with live order re-allocation.
- **Marketing Landing Page:** Public marketing website featuring ROI calculator, pricing tiers, and trial signups.
- **Customer / Supplier Portal:** Supplier interface for PO acknowledgment, capacity updates, and compliance doc vault.
